

YEAR 5 LEARNING LETTER 10/11/23

We have been extending our focus on 'show not tell' as well as trying to use adverbials and subordinating conjunctions to create a variety of sentence structures. We have also learned about using language to persuade others.

I was a little optimistic last week. We still needed to add the final details and touches to our electric vehicles.

The task this week was to consider the evidence and select a significant legacy of the Romans. We had to consider whether the invasion and rule of the Romans were positive or negative for the British Isles.

We finished our first unit on multiplication and division by looking at multiplying and dividing by 10,100 and 1000. This involved a review of place value. We also started our new unit of learning – fractions. We started by focusing on equivalent fractions.

Ambassadors

Ethan and Owen
Both gave reasoned arguments for their selection of a significant Roman legacy.

This
Week

Maths

Computing

SCIENCE

We started to analyse and compare examples of videos featuring different production and editing techniques. This is preparation for making our own videos.

We investigated mixing different materials with water. Using test tubes and looking like 'real' scientists we found out about materials that dissolved, reacted or did nothing.

Looking
Forward

Next week,

We will be separating mixtures in science and comparing improper fractions and mixed numbers in maths. We will be starting to learn about rivers and continue learning about how to look after money.
